

# NEW PRODUCT!

## INTRODUCING THE NEW DIXON BAYCO DBCL-200 LOCKING HANDLE KIT FOR 1-½" 2" DB SERIES DRY DISCONNECT COUPLERS

Dixon Bayco is pleased to introduce the Dixon Bayco DBCL-200 locking kit for 1-½" and 2" DB dry break couplers. This optional locking handle kit keeps the handle from accidentally swinging **closed or open** (the DB dry break internal sleeve prevents the product from spilling). Building on our superior handle design, Dixon Bayco has developed a locking mechanism that is both easy to use and install. Made entirely of high grade Stainless Steel it perfectly complements our all Stainless Steel handle. This is the only handle and locking device that is all Stainless Steel and can be installed without removing the couplers packing nut. This makes it the only locking device that can be field installed in as little as 3 minutes with **simple hand tools**. Ergonomic design makes one hand operation of opening and closing simple and comfortable. The two stage locking mechanism provides added security and integrates an option for a pad lock if desired.
